

ManTech

Become an integral part of a diverse team while working at an Industry Leading Organization, where our employees come first. At ManTech International Corporation, you'll help protect our national security while working on innovative projects that offer opportunities for advancement.

Currently, ManTech is seeking a motivated, career and customer-oriented Software Developer Associate to join our team. Locations vary depending on business needs.

Race Winning Brands (RWB) is an accumulation of independent businesses, each with market leading brand recognition that sells primarily pistons, and other engine related components into the Automotive and Powersports markets (high-performance racing, motorcycles, all-terrain vehicles, snowmobiles, personal watercraft, etc.). The companies are market leaders in manufacturing highly engineered engine components on their respected fields. Our product lines include Rekluse clutch baskets, JE Pistons and Wiseco Pistons and more.

Welcome is a Webby-award winning virtual event platform that enables a single person to produce a jaw-dropping experience that feels like an interactive TV show. Welcome is on a mission to provide access to create equitable experiences that connect, transport and engage people like never before. We're a well-funded, Silicon Valley startup backed by top VCs. Our founders, investors and advisors are from Google, Facebook, Yahoo, InstaCart, Dropbox, Slack and more.

This is an incredible opportunity for a new graduate or junior level engineer to have mentorship and coaching from a group of passionate and talented senior team members. We are growing insanely fast and looking for a strong full-stack software engineer to join our world-class team, match the tsunami of demand we are already experiencing, and help us grow even faster.

You want your code to have significant and measurable positive impact. You love bringing people together. Your happiness comes from the joy of others, and you look forward to building stand-out moments of delight into the Welcome experience. You are a keen problem solver and team player. You take pride in the craftsmanship of your work, and appreciate when it is rewarded; our customers are fine with fewer features, but are not okay with broken features. The Junior Software Engineer opportunity at Welcome encompasses architecture, design, implementation, and testing to ensure we build and release products in a way that upholds the luxury quality of our brand.

A day in the life of a Junior Fullstack Software Engineer at Welcome includes:

- Being a part of an inclusive, collaborative team that embraces healthy discussions and supports each other in their goals.
- Designing, implementing, testing, and delivering robust and delightful products, continuing to keep the Welcome experience best-in-class.

- Learning our development process, culture, and code base, providing input, and then improving it. Continually leave each of these in a better state than when you found it.

Harmonia

Harmonia Holdings Group, LLC, an award-winning, minority female-owned federal government contractor, has an exciting opportunity for a Journeyman Business Objects Computer Programmer to join our team. This role will be responsible for analysis, design, coding, debugging, testing, and 508 testing, will have proficiency in developing test cases and scenarios, and have the ability to run tests and analyze the testing failures and determine how to change the code to remediate the problems. Additionally the BOCP will have the ability to interface with customers directly to analyze and resolve specific problems with the reports and a strong ability to communicate directly with project/program managers and other developers/IT partne

LiveRamp's mission is to connect data in ways that matter, and doing so starts with our people. We know that inspired teams enlist people from a blend of backgrounds and experiences. And we know that individuals do their best when they not only bring their full selves to work but feel like they truly belong. Connecting LiveRampers to new ideas and one another is one of our guiding principles—one that informs how we hire, train, and grow our global team across nine countries and four continents. Click [here](#) to learn more about Diversity, Inclusion, & Belonging (DIB) at LiveRamp.

LiveRamp is the leading data connectivity platform. We believe connected data has the power to change the world. Our platform powers insights and experiences centered around the needs of real people, and in ways that keep the Internet open for all. LiveRampers thrive on building together with curiosity and humility—and have a good bit of fun along the way. We're always looking for smart, kind, and creative people to grow our team and impact.

Mission: LiveRamp makes it safe and easy for businesses to use data effectively.

LiveRamp is looking for new graduates that crave challenges and seek out dynamic experiences and to jump right in and be fast-tracked onto a team that is the best fit for your skills and interests. Here

at LiveRamp, we're changing the world of data connectivity. Our technology unites the marketing technology ecosystem, enabling brands to measure the impact of digital marketing on sales and deliver highly relevant messages to consumers on virtually any channel or device.

As a Software Generalist you will help bring this vision to life by tackling your projects head on. It's hard to say what tomorrow's challenge may be, but in this role, you'll be happy to hack away at it, whether it's a Ruby on Rails web application, a big data workflow in Spark, or something completely new. You'll also collaborate with other engineers to execute on a diverse range of projects.

On the engineering team at LiveRamp, we value ownership and individual contribution within a collaborative environment. Be ready to leave your ego at the door, roll up your sleeves and start solving huge challenges as soon as you begin.

Join One Of The Following Teams Within Engineering

- Data Networks
- Outbound Platform Integration Team (OPI)
- File-Based Recognition (FBR)
- DevOps
- Data Management (DM)
- Segment
- Activations Backend (BE)

You Will

- Design and build sophisticated systems to process and visualize massive amounts of data.
- Make mistakes. Fix them; learn from them; make different ones next time.
- Be at the forefront of technology innovation. Keep LiveRamp on the cutting edge of industry tools and best practices.
- Push your teammates to become stronger engineers. They will do the same for you.
- Take our engineering, business development, and culture in a whole new direction during one of our four Hackweeks every year.

About You

- Excited by the idea of building scalable and reliable products
- A talented new grad (or recent grad) looking to start a full time role in Winter/Spring 2022
- Comfortable working in multiple languages, frameworks, and environments
- Possess a startup personality: smart, ethical, friendly, hard-working and productive
- A data enthusiast who wants to be surrounded by brilliant teammates and huge challenges
- Have excellent communication and collaboration skills
- Excited to work with products that have close interactions with customers

A client HQ in Kansas City is looking for a REMOTE Full-Stack Software Engineer to join their team for a year 3-6 month contract to hire. This developer will assist a team of 5-7 other developers with enhancement and some incident support of web payment applications for an application ready to go into production. You will be helping move the application into production.
